Terzhov, I.F.

TITLE:

Experience in Organizing Mail Delivery in Saratov

PERIODICAL:

Vestnik svyazi, 1959, Nr 9, pp 20-22 (USSR)

ABSTRACT:

This article deals with measures taken to improve mail delivery service at the Saratov Office. Organization of the delivery of correspondence, the press, postal money orders [PMO] and pension checks was discussed at a permanent production conference. On the basis of a proposal made at the conference the delivery section of the post office now keeps a pension card file; pensions are paid by PMO. The author describes the introduction of three daily mail deliveries on a number of routes, and the reconsolidation of delivery routes; operation under the new system is outlined. The 3-delivery system will soon be expanded to include all routes, states the author. Measures for easing the postman's job are also described, particularly the installation of mail boxes in the entrances of apartment buildings in accordance with a resolution of

Experience in Organizing Mail Delivery in Saratov

the Ispolkom saratovskogo gorodskogo soveta deputatov trudyashchikhsya (Executive Committee of the Saratov Municipal Council of Worker's Deputies) of February 4, 1957. Decentralized procurement of work clothes and uniforms for postmen was organized. Also described are courses set up to prepare postal agents and section chiefs. The author mentions that, having completed these courses, postman Tokts is working as chief of the 46th gorodskoye otdeleniye svyazi (municipal communications section), Borisova as chief of the 47th, Kurenkova as postal agent at the 40th municipal communications section, Sumskaya as agent at the 41st, and Atyushina as agent at the 39th. In addition the following persons are mentioned: Tatari-nova, head of the delivery section at the post office; Samokhina, Bystrichenko, Rodionova, Pro-sina, postmen; D.V. Beletskiy, pensioner; Rubtsov, Doronkin and Epshteyn, "old communists" and residents

TITLE:

Space charge waves in longitudinally non-uniform electron streams

PERIODICAL:

Referativnyy zhurnal, Avtomatika i radioelektronika, no. 4, 1962, abstract 4zh101 (Uch. zap. Saratovsk. un-t, 1960, 69, 17-31)

TEXT: Results are reported of a theoretical study of periodic excursions, propagated in nonuniform electron streams. The well-known analogy between electron stream and transmission line is used in calculations. With the aid of the transmission line theory, differential equations of nonuniform electron flow are solved; particular attention is paid to the elucidation of the influence exerted by the variation law of the stream wave impedance on the magnitude of parametric amplification of space charge waves which takes place in a nonuniform stream. The cases are considered of monotonic, step-wise and periodic (abrupt, trapezoidal and harmonic) variation

Card 1/2

Space charge waves ...

of the wave impedance of the stream. It is established that maximum amplification is obtained when the wave impedance varies in an abrupt manner. [Abstracter's note: Complete translation.]

TITLE: Space charge waves in electron flows being nonuniform in the longitudinal direction

PERIODICAL: Referativnyy zhurnal, Fizika, no. 4, 1962, 15, abstract 4Zh101
("Uch. zap. Saratovsk. un-t", 1960, v. 69, 17 - 31)

TEXT: Results of a theoretical study of the propagation of periodic perturbations in a nonuniform electron flow are presented. The well-known analogy between electron flow and infinite line is applied to the calculations. The differential equations for a nonuniform electron flow are solved using the infinite line theory. Special attention is devoted to clarifying the effect of the change of the characteristic impedance of the flow on the degree of parametric wave amplification of the space charge in the nonuniform flow. The cases of monotonic, stepwise, and periodic (discontinuous, trapezoidal, and harmonic) changes of the characteristic impedance are considered. The amplification factor is maximum, if the characteristic impedance changes discontinuously.

AUTHOR: Terzić, Petar

TITLE: Investigation of changes on the surface of steel specimens subject to varying bending

PERIODICAL: Referativnyy zhurnal, Mekhanika, no. 1, 1963, 77, abstract 1V593 (Saopst. Inst. ispit. mater. NRS, 1961, v. 9, no. 14, 47-57 (Serbo-Croat; summaries in Eng., Rus., Fr. and Ger.))

TEXT: Plane polished specimens of low-carbon steel were tested for variable bending at stresses below and above the fatigue limit in a symmetrical cycle. At stresses exceeding the fatigue limit numerous displacements near ferrite crystals were observed, with a normal microscope, whose number increased with the number of test cycles. At the end of the test almost all crystals on the surface showed traces of displacements. At the fatigue limit, displacement lines observed on a small number of crystals even when the specimen passed the test base 10^7 times without breakdown. A special feature

Card 1/2

Investigation of changes ...

S/124/63/000/001/074/080
D234/D308

of the test at stresses exceeding the fatigue limit is the appearance of submicroscopic cracks in the displacement lines. Their continuous growth during test leads to the formation of micro- and macrocracks, one of which causes the breakdown of the specimen. Stages of development of displacement lines and cracks are illustrated by microphotographs. 16 references.
